Construction of plane spotting platforms to start before the end of the year

The environment permit for the construction of the plane-spotting platforms in Steenokkerzeel (near the transit centre) and in Zaventem (Vliegbos) was granted at the end of October. A contractor has since been appointed.

The project has been somewhat delayed by the permit process, but the construction of the platforms will nevertheless start in 2017. Depending on weather conditions, we expect that the spotting platforms will be completed in April 2018.

We will keep you informed on the progress of the project!
